Perfect Score: 6366

Sequence: 1 MLFWAAHLLLSLQLAVAYCW.....NNTEHFQASIQDYTRRCGTT 842

Scoring table:

PAM 150 Gap 11

earched: 188963 seqs, 23686106 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-geneseq36 1:geneseqp

Statistics: Mean 38.664; Variance 175.009; scale 0.221

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzheimer's disease, Huntington's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Parkinson's

The tissue from which this receptor and receptors from human parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to treat diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Brown EM, Garrett JE, Hebert WPI; 98-347412/30. The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. I proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor
                                                                           DNA encoding calcium receptor polypeptide(s) - utherapeutic purposes, e.g. hyperparathyroidism a Claim 4; Columns 107-116; 174pp; English.

The present sequence is bovine parathyroid cell receptor 1 (BoPCaR 1).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The tissue from which the human parathyroid calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that tasses. They can also be used to raise antibodies for use in detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibody production

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          affect the one or more CR activities in a cell not comprising the recombinant nucleic acid. The present sequence represents human parathyroid CR, designated a phuPCaR 4.0. The nucleic acid sequence of phuPCaR 4.0 can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         409
                                                                                                                                                                                                                                                                                                                                                           581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         465
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   326

Both clone consisted for the presence of functional calcium receptors. Both clone consisted for the presence of functional calcium receptors as assessed by the consistence analysis of the two conversations and consistence of at the same propriate calcium receptor agonists, e.g. NPS R-467 and NPS R-568. Consequence analysis of the two conversations as a sessed by the consequence analysis of the propriation and consistence of at the sequence variation and consequence analysis of the propriation and consequence analysis of the propriation and consequence analysis of the human can gene consequence analysis of the human can gene consequence that the additional 30 bp in clone phupCaR4.0 the compared to phupCaR4.0, results from alternative mRNA splicing. This alternative encoded by pHupCaR5.2 between residues 536 and 537 of the protein encoded by pHupCaR5.2 between residues 536 and 537 of the protein concoded by pHupCaR4.0. In addition pHupCaR5.2 encodes Gln at position concoded by pHupCaR5. The human can gene encodes Gln at position and consequence analysis of the protein concoded by pHupCaR5. The human can gene encodes Gln at position concoded by pHupCaR5. The human can gene encodes Gln and protein concoded by pHupCaR5.0 between the protein professions. The human can gene encodes Gln and protein concoded by pHupCaR5.0 between the protein concoded by pHupCaR5.0 be

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. sequence 1078 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding calcium receptor polypeptide(s) therapeutic purposes, e.g. hyperparathyroidism Claim 20; Columns 125-134; 174pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure: Page 169-170; 308pp; English.

The invention relates to polynucleotide sequences encoding mammalian pheromone receptor polypeptides. The polypeptides are expressed in murine and rat vomeronasal organ. The products can be used for modifying pheromone activity, e.g. for decreasing pheromone receptor mediated signal transduction. They can be used for controlling fertility and behaviour in vertebrates and invertebrates. Compositions comprising the polypeptides are particularly useful in e.g. controlling fertility in interrupting the normal behaviours of rodents or insects by interrupting the normal behaviours of rodents or insects that result in reproduction. The present sequence represents a rat kidney extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         calcium/polyvalent cation-sensing receptor.

07-JUN-1995;
The tissue from which the rat kidney calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. To proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA encoding calcium receptor polypeptide(s) - usef therapeutic purposes, e.g. hyperparathyrcidism and Claim 20; Columns 133-142; 174pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; T95860
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 98-008040/01.

Its amino acid sequence was deduced from a kidney CDNA clone (see T89290). It shows 74% homology to rat kidney CPCVR and bovine parathyroid PVCR and possesses general features that are homologous to PVCR PYCR and possesses general features extracellular domain, 7 transmembrane domains and a cytoplasmic C-terminal domain. Also claimed are: an isolated PVCR present in the plasma membranes of aquatic species, especially on the apical membrane of epithelial cells of elasmobranch fish, particularly from cells found in the collecting duct or late distal tubule in the kidney, intessine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR; and a method of soreening for aquatic PVCR agonists and antagonists. Modulation of

                                                                                                                                                                                                                                                                            the expression of the aquatic PVCR activates or inhibits aquatic PVCR mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. The method facilitates the aquaculture of marine fish and can provide for the development of marine fish that are easily adaptable to fresh water aquaculture. Sequence 1026 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  W32059 standard;

Claim 5; Fig 48; 174pp; English.
The tissue from which the human parathyroid calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration,
e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that tissues. They can also be used to raise antibodies for use in detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             calcium receptor; detection Homo sapiens.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC provided that the cell does not have functional CR expression from CC endogenous nucleic acid; (B) determining the ability of the test CC compound to affect one or more activities of the calcium receptor; and CC (C) comparing the ability with the ability of the test compound to affect the one or more CR activities in a cell not comprising the CC recombinant nucleic acid. The present sequence represents human CC parathyroid CR, designated a pulpopar 5.2. The nucleic acid sequence of CC phupCaR 5.2 can be used as part of the recombinant nucleic acid in the CC method described above. The compounds identified can be used to treat CC diseases or disorders characterised by abnormal calcium homeostasis, e.g. CC hyperparathyroidism, osteoporosis and other bone and mineral-related CC disorders. They can also be used for the treatment of diseases and CC disorders associated with disrupted Ca2+ responses, e.g. setzures, CC stroke, spinal cord higher, hypoxia-induced nerve cell damage such as in CC diseases such as Alzheimer's disease, Huntington's disease and according to the componed derived the control of the case and cord control of the componed the control of the case and cord control of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Statistics: Mean 51.690; Variance 98.585; scale 0.524

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
